

Sustainability Appraisal of the Plan Objectives and Proposed Approach (Local Plan Regulation 18)

September 2022

1. Introduction

- 1.1 The purpose of the planning system is to contribute to the achievement of sustainable development.
- 1.2 This document is the Sustainability Appraisal (SA) Report accompanying the Regulation 18 consultation on the Building a Better Future Plan, the new local plan for Havant.
- 1.3 Once in place, the new Local Plan will establish a spatial strategy for growth and change for the period to around 2040 (timeframe tbc), identify development sites and protections to deliver that strategy and establish the policies against which planning applications will be determined.
- 1.4 It is a requirement alongside the production of a Local Plan that Sustainability Appraisal is undertaken in line with the Environmental Assessment of Plans and Programmes Regulations 2004, which transpose into national law the EU Strategic Environmental Assessment (SEA) Directive. These regulations remain in force after the UK has left the European Union.
- 1.5 SA is a mechanism for considering and communicating the likely effects of a draft plan, and alternatives to that plan, with a view to avoiding or mitigating adverse effects and maximising positive ones. It is a multi-stage process, most of which is undertaken in separate appraisals of individual plans. The national guidance on strategic environmental assessment and sustainability appraisal sets out the process for local plans in a number of stages¹, as follows:

STAGE A: Setting the context and objectives, establishing the baseline and deciding on the scope

- A1- Identify other relevant policies, plans and programmes and sustainability objectives
- A2- Collect baseline information
- A3- Identify sustainability issues and problems
- A4- Develop sustainability appraisal framework
- A5- Consult the consultation bodies on the scope of the sustainability appraisal report

STAGE B: Developing and refining alternatives and assessing effects

- B1- Test the Local Plan objectives against the sustainability appraisal framework
- B2- Develop the Local Plan options including reasonable alternatives
- B3- Evaluate the likely effects of the Local Plan and alternatives
- B4- Consider ways of mitigating adverse effects and maximising beneficial effects
- B5- Propose measures to monitor the significant effects of implementing the Local Plan

STAGE C: Prepare the SA Report

STAGE D: Seek representations on the SA Report from consultation bodies and the public

STAGE E: Post adoption reporting and monitoring

- E1- Prepare and publish post-adoption statement
- E2- Monitor significant effects of implementing the Local Plan
- E3- Respond to adverse effects

¹ <u>http://www.gov.uk/guidance/strategic-environmental-assessment-and-sustainability-appraisal</u>

1.6 This report represents stages B1 and B2 of this process. Stage A was undertaken in early 2022, and the scoping report is available alongside this report. The remaining parts of stage B will follow as the draft plan is prepared during 2023.

2. Testing the Local Plan Objectives and Proposed Approach (SA Stage B1 and B2)

- 2.1 This section provides an assessment of the Local Plan objectives against the objectives of the SA Framework an assessment of the Local Plan Proposed Approach against the SA Objectives.
- 2.2 The Scoping Report established a Sustainability Appraisal Framework, which will be used at each stage of plan preparation to assess the impact of the proposed strategy and policies, as well as alternatives to them.
- 2.3 The SA themes, objectives and decision making criteria are repeated below for ease of reference².

Sı	stainability Theme	and Objective	De	cision Making Criteria:
			'Do	pes the policy or allocation help to'
1	The Natural Environment	To protect and enhance the	а	protect designated sites and protected species from development related harm?
	and Biodiversity	natural environment	b	protect ecological networks?
		and support	С	enhance ecological networks?
		biodiversity	d	promote or support biodiversity net gain?
			е	promote or support nutrient neutral development?
2	Climate Change	To minimise the	а	promote sustainable construction methods?
		borough's contribution to	b	reduce carbon emissions from buildings?
		climate change		(NB transport covered elsewhere)
		and ensure resilience to the	С	reduce water use?
		effects of climate change	d	support the switch to low carbon, renewable sources of energy?
			е	promote climate change resilience measures for buildings, infrastructure and public spaces?
				(NB flood risk covered elsewhere)
3	Homes for All	To provide good quality homes	а	provide homes for the people of Havant? (number, type, tenure, size)
		for all	b	provide affordable homes?
			С	provide homes for those with specialist needs?
			d	provide healthy homes? (amenity, space, storage, accessibility, access to private open space)

² The full framework also includes a column of indicators and assessment criteria.

 Healthy and Safe Communities Healthy, inclusive and safe places b improve residents' access to natural spaces green spaces, parks, leisure open spaces recreational facilities? b improve residents' access to natural space green spaces, parks, leisure open spaces recreational facilities? c enable and support healthy lifestyles? d promote inclusivity of provision and design facilities and services? e support equal and safe access to facilities services, particularly by walking and cyclin f d design out crime? g avoid and/or mitigate flood risk? b strengthen the function of the Borough's employment areas? c Support the employment prospects of the community? d support the tourism and visitor economy now and into the future c Support the tourism and visitor economy now and into the future a support the tourism and visitor economy now and into the future a support the employment prospects of the community? d support the tourism and visitor economy e support the tourism and visitor economy e support the long-term viability of town centers? 6 Effective Transport and efficient 	and s, and of and g? ocal

			f	be sensitive to the local environment and promote a sense of place?

Testing the Local Plan Objectives

2.4 The Corporate Strategy 2022-2025 provides the overall vision for the Building a Better Future Plan, which is to enhance the lives of our residents, businesses and visitors. This strategy is to be achieved through six themes which will deliver the Council's priorities. These in turn have informed the Objectives for the Local Plan, which are shown below. They are also presented in the Regulation 2018 consultation material for comment.

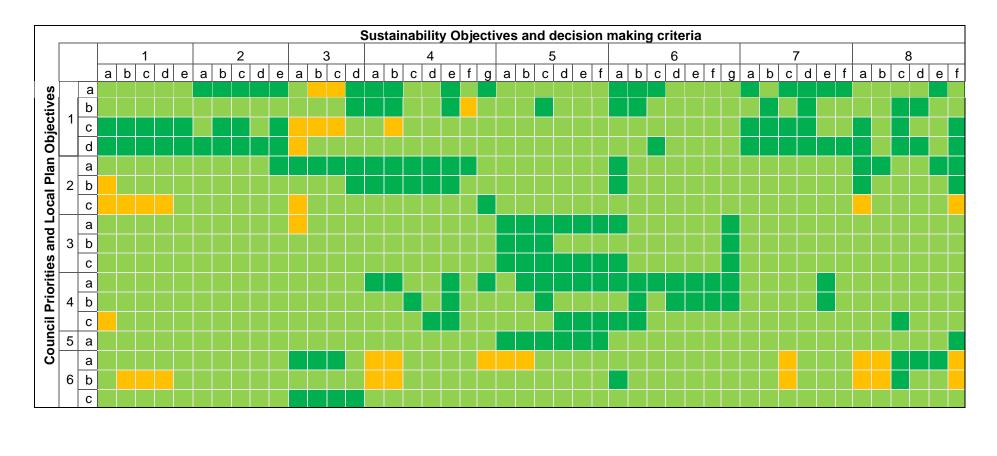

Со	uncil Priorities	Lo	cal Plan Objectives
1	An environmentally aware and cleaner borough	а	Minimising the climate impact from and on new development including by reducing energy demand through the sustainable location, design and construction of new development
		b	Focussing transport improvements on walking, cycling and public transport rather than the private car and providing easy connections for walking and cycling between people and places.
		С	Moving from protecting our natural environment to pursuing a net gain in biodiversity in line with the new Environment Act.
		d	Minimising the impact of development on all types of natural resources.
2	A safe environment, healthier and more active residents	а	Secure high quality development design and layouts that support the wellbeing of all residents, encourage active lifestyles and foster a sense of place and community.
		b	Provide safe, easy access to recreation and leisure facilities, children's play areas and outdoor spaces to support physical and mental health and boost wellbeing.

		С	Make choices about development locations and protection schemes that avoid or minimise the risk of flooding.
3	A thriving local economy	a b	Secure business and employment growth in the Borough by identifying appropriate and sufficient employment land which will attract businesses and create new jobs, particularly in the advanced manufacturing and engineering sectors. Facilitate delivery of the Freeport Tax site at Dunsbury Park including a new skills and innovation centre for Leigh Park.
		С	Protect and enhance the Borough's key existing employment areas.
4	A revitalised borough with infrastructure that meets our ambitions	а	Ensure that infrastructure delivery is fully considered, and provided alongside new development to deliver safe, healthy and vibrant communities.
		b	Ensure that opportunities for active travel are incorporated into new developments, integrating them into the Borough's existing communities.
		С	Provide a sustainable and vibrant future for the town centres and Hayling seafront, whilst improving residents' quality of life and protecting the Borough's environmental assets and coast.
5	A responsive and commercial council	а	Take an active role in the development opportunities to deliver regeneration in our town centres and at Hayling Island seafront, setting out where the Council will use tools such as development agreements and compulsory purchase to focus on the delivery of the most sustainable development sites in the Borough.
6	A quality home for all.	а	Address the need for housing as a basic human right, helping future generations to have the access to an affordable high quality home as has been the case in the past. This will need to be done in a sustainable manner recognising the environmental constraints that exist in Havant Borough, though acknowledging that with a limited number of sites available for development, robust solutions to overcoming site constraints will have to be found.
		b	Maximise development within the urban area, though acknowledging that extensive greenfield development will also be needed to address the need for housing.
		С	Provide a choice of housing which meets the varied needs of residents, including the specific needs of different groups in the community.

- 2.5 The first stage of the sustainability appraisal of a local plan is testing the objectives. The matrix below shows the results of the testing of the proposed plan objectives for their compatibility with the sustainability objectives.
- 2.6 It shows a high degree of compatibility, including many cases, where the objectives are fully aligned. This is perhaps unsurprising, as the role of the SA is to support sustainable outcomes from the local plan, and the role of the local plan is to promote sustainable development. Therefore, there is a high degree of overlap between the

objectives of the SA framework and the objectives of the plan, which is reflected in assessment of compatibility.

- 2.7 Nevertheless, there are some areas of potential conflict. These potential conflicts largely reflect the fact that the nature of planning is to deal with competing interests in the use of land. The vast majority of the potential conflicts identified relate to this. Two very clear groups of potential conflict are apparent:
- 2.8 Firstly a number of potential conflicts are noted where objectives relate to housing delivery. The high need for housing and the objective to meet this need have the potential to conflict with objectives relating to other potential uses for the same land, such as green spaces, biodiversity or employment. Using land or resources to meet one of these needs reduces the ability to meet another. Similarly, development can also conflict with objectives relating to avoiding flood risk, protecting landscape, townscape and heritage. Development in itself also brings with it an intensive use of natural resources, both during construction and afterwards during human habitation.
- 2.9 It is the role of the planning system and the local plan to balance all of these conflicts. They are not insurmountable. While some impacts from development on all the objectives noted here is likely (and vice versa where development has to be restricted to meet other objectives), the local plan can be used as a tool to actively manage and minimise these conflicts. Policy writers, both of site allocations and thematic policies will use the results of this phase of the SA to ensure that the flagged potential conflicts are addressed through relevant policies which set what development must do to prevent, minimise or mitigate these impacts. The local plan objectives in themselves have also begun to note the need for sensitive management eg Objective 6a seeks to meet housing need, but also flags environmental constraints.
- 2.10 Secondly, conflicts between the objective of protecting the natural environment and increasing biodiversity, and the objectives relating to human access to green spaces are noted. Similarly to managing the potential effects of development, these two conflicting objectives can and will be managed through the local plan, by including protective policies for the most sensitive natural habitats while improving human access to less sensitive spaces, and seeking designs for new open spaces which can accommodate both humans and wildlife.
- 2.11 A third group where potential conflicts arise at this high level of assessing the objectives. The flood risk management objective includes the potential for engineering solutions such as sea defences, which have the potential to conflict with objectives relating to landscape and sense of place in the Borough's coastal areas. Similarly, objectives relating to more intensive use of land eg high densities could also conflict with objective relating to sense of place and the local built environment. The objective to design out crime and the objective to promote good pedestrian and cycle links could conflict if poorly designed. It is considered that detailed design can minimise or remove the conflict. Policy writers on these topics will have to ensure the potential conflict is addressed and wherever possible removed, in writing the requirements.

Key fully aligned compatible

possible conflicts

Testing the Proposed Approach

2.12 As well as the Vision and Objectives, the Regulation 18 consultation documents sets out the proposed approach and policies for the Local Plan. This section of the SA report uses the SA framework to test the approach and alternatives to it and notes the likely effects, using the following symbols and colours.

Appraisal symbol	Assigned where
++	 Strong Positive notable sustainability gains are expected to arise from the policy or development of the site; and/or the policy strongly supports the sustainability objective; and/or
+	 Positive some sustainability gains are expected to arise from the policy or development of the site; and/or the policy supports the sustainability objective; and/or
+/-	 Neutral no or minimal effects against the sustainability objective are anticipated from the policy or development of the site; and/or the policy neither works against nor supports the sustainability objective; and/or if negative effects could arise from the policy, the policy also requires mitigation; and/or the policy might have both minor positive or negative effects, but on balance is neutral
?	 Uncertain or Unknown effects are uncertain or unknown (at the time of the assessment)
-	 Negative some sustainability losses are expected to arise from the policy or development of the site; and/or the policy works against this sustainability objective
	 Strong Negative notable sustainability losses are expected to arise from the policy or development of the site; and/or the policy works strongly against the sustainability objective

- 2.13 The assessment may help consultees on the regulation 18 plan understand why the Council intends to pursue a particular approach. The anticipated positive effects of doing so are show, while acknowledging any possible downsides.
- 2.14 Alongside the proposed approach, alternatives to that approach are presented. In each case that includes the alternative of not having an approach or a policy on a particular topic in the local plan. In some cases, additional alternatives are presented.
- 2.15 Some alternatives are presented, but not evaluated. This is the case where it is considered that it would not be realistic or reasonable to pursue that alternative, or where there is not yet sufficient detail to assess. These tables are coloured fully in pink, and reasons are given for why no assessment is presented.

2.16 In the following tables, headings and numbers running from left to right across the table refer to the SA objectives (see paragraph 2.3). The policy theme being considered is shown in the heading.

The proposed approach is for the plan to seek to address the Borough's housing need of 516 homes a year, identifying all possible avail land that could contribute towards Havant's objectively assessed need, including both brownfield and greenfield land, on sites of varyin sizes across the borough, in town centres and a strategic site. Cooperation with neighbouring authorities on unmet need. Policies will so out the overall requirement (requirement per year starting off lower and then stepping up once larger, more complex sites are brought forward) and a suite of housing allocations identifying suitable sites. 1 2 3 4 5 6 7 8 Climate Homes for Healthy Biodiversity Change All Communities Economy Transport Resources Heritage a b c d e a b c d e a b c d a b c d e f g a b c d e f g a b c d e f a b c d																						ous

The proposed approach supports the sustainability objective of providing homes for all, but doing so could bring with it negative effects against the environmental, natural resources, landscape/townscape and heritage objectives, as well as affecting transport networks and some elements that m for healthy and safe communities. Against the economy objective, both negative and positive effects are noted – land for homes competes with lan employment used, but the local economy will only do well if sufficient homes are provided to meet local need. Homes in town centres can help imp their vitality and viability.	Bi	odive	ersit	y					_				tor						es			E	cor	nor	ny				Tra	ans	por	t							_					•	&

Government requires all Local Planning Authorities to address the area's need for housing based on the standard method. It is not considered a realistic alternative to exclude from the plan a consideration of how much development is required for the plan period.																																					od. Removing development on Hayling Island seafront from the strategy would improve the sustainability of the approach against the flood risk objective.
However, such development would actively support the delivery of other elements of the regeneration strategy, so removal of this potential funding
mechanism has the potential to undermine the delivery of the strategy. It would be preferable to pursue to preferred strategy and undertake further
work to assess and ensure the safety of potential development in the process.

Gypsies, Travellers and Travelling Showpeople

It is proposed that the plan will safeguard the existing gypsy and traveller provision at Long Copse Lane in Emsworth, and that the Council will assess whether there is a need to identify further provision for travellers in Havant Borough. A specific policy will provide the framework for how planning applications for such accommodation would be assessed and what is expected from developers of such sites.

3. Consultation and Next Steps

- 3.1 Havant Borough Council is undertaking a 'Regulation 18' consultation on its proposed approach to its Local Plan from 3 October to 14 November 2022.
- 3.2 This SA report and the SA Scoping Report that preceded this report are being made available as part of that consultation. The contents of this report can be used as a tool to help consultees understand why a particular course of action is being proposed. Consultees are invited to comment on the plan, the SA report or both.
- 3.3 Details of the consultation, and how to respond can be found at <u>https://www.havant.gov.uk/local-plan</u>
- 3.4 Following the consultation, the Borough Council will consider all the responses received. These, together with a new and updated evidence base, will influence the content of the draft (Regulation 19) Local Plan. As well as the topics presented in the Reg 18 report and assessed through this SA, the draft plan will identify the sites and areas which the Council proposed to allocate for development or protect from development.
- 3.5 When the draft plan is published, it will be accompanied by a full SA report, in fulfilment of the remained of stage B and Stage C of Sustainability Appraisal (see section 1.5). That SA report will again will be subject to consultation.
