

## BEACH RECYCLING 2008

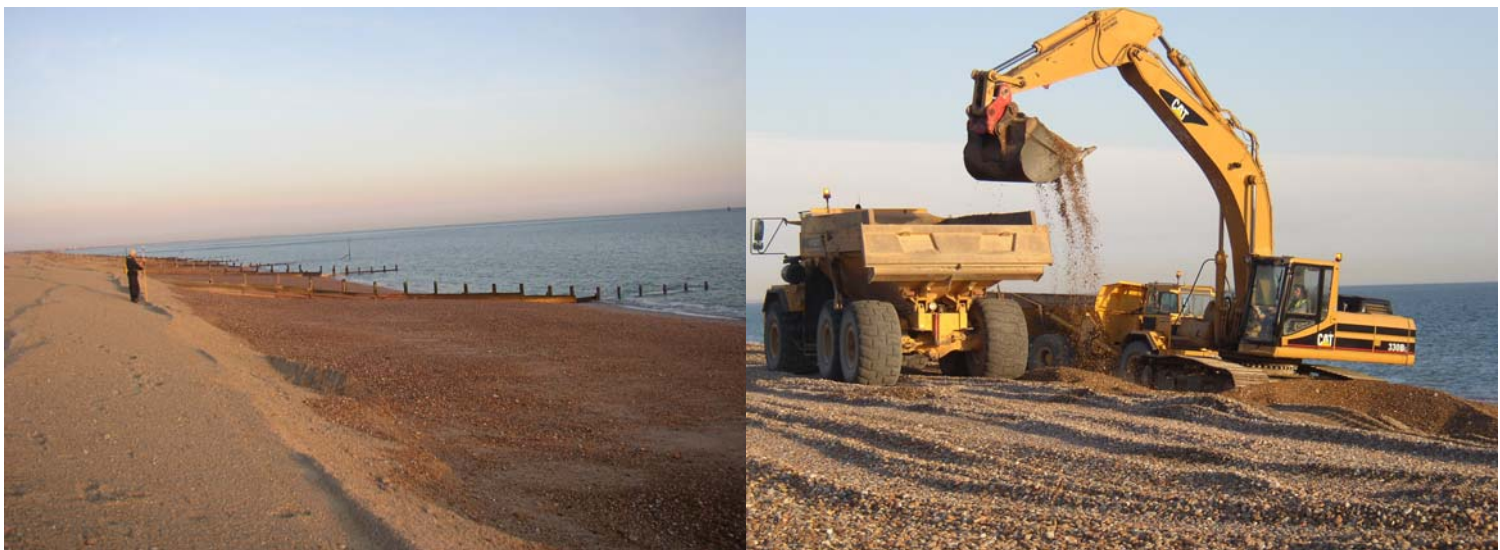

This years beach recycling operation is due to begin on 10th March, and will last approximately 3 weeks. The recycling is carried out in accordance with the Beach Management strategy for the Eastoke frontage.

Officers at Havant Borough Council have let a contract annually for the past 11 years to recycle shingle from areas of accretion outside of Eastoke, back to eroded areas along the southern Eastoke frontage. The operation involves using earthmoving plant to excavate, transport and place the shingle. The pictures show the nature and scale of the operation.

Demarcation of the haul route coupled with warning signs at access points to the promenade will aid to inform pedestrians and other beach users of the ongoing operation. Detailed surveys of the Eastoke frontage have been carried out to identify areas of vegetated shingle within environmentally designated areas. From these surveys the haul route has been agreed and defined using traffic cones to mitigate damage to the environment.

If you have any further questions about the operation please contact the coastal defence team at:
